Date	4 October 2022
Team ID	**PNT2022TMID20463**
Project Name	Smart Fashion Recommender Application
Maximum Marks	4 Marks

Solution Architecture:

User :

● The user will log in to the website and browse the things that are offered there. The consumer can speak directly to the **IBM Watson** about the products rather than going through multiple screens to make a purchase online. Obtain suggestions based on the data the user has provided.

Admin :

● The administrator's job is to look over the stock database and keep tabs on anything that people are buying.

Database :

● In the **IBM DB2** database, chatbot will keep track of customer information and orders.
